Cloud Demand

- **80% of IT budgets** will be allocated to cloud infrastructure during the next 16 months.
~Intel Security Study of 1200 IT decision makers across 8 countries (April 2016)
- “Our business partners are leveraging the **dynamic nature** of the cloud, the improved speed, increased collaboration, the elasticity of services...”
~Timothy Youngblood, CISO, Kimberly-Clark
- If you’re running a business, it’s likely that **connected cars will become the ‘smart offices’** of the future... mobility and connectivity are the key forces that will define the new digital enterprise.
~Mary Meeker June 2016 Internet Report

More about Cloud

Cloud computing is Internet-based computing, whereby shared resources, software, and information are provided to computers and other devices on demand, as with the electricity grid. Cloud computing is a natural evolution of the widespread adoption of virtualization, Service-oriented architecture and utility computing. Details are abstracted from consumers, who no longer have need for expertise in, or control over, the technology infrastructure "in the cloud" that supports them.[1] Cloud computing describes a new supplement, consumption, and delivery model for IT services based on the Internet, and it typically involves over-the-Internet provision of dynamically scalable and often virtualized resources.[2][3] It is a byproduct and consequence of the ease-of-access to remote computing sites provided by the Internet.[4]
