GET

SUB-OPTIMAL SOLUTION & HIGH COGS

Reduce COST and Improve PRODUCTIVITY

C, C++, Java, Python, Go-Lang	Application Programming / Coding				
	Functions	Events	Logics	Timers	Interfaces
	Security	Licensing	Tenancy	Messaging	
	Versioning	Logging	Debugging	Admin Control	
	Thread Pools / Processes	IPC	Error Handling	Memory	
Virtualization Layer / Containers					

DON'T PANIC!

**108 things that
could kill you - but
probably won't!**

ARETHERAL

REALIZATIONS

Programmer productivity is dramatically lower when building server-side systems compared to user-interface systems.

Server-side Application changes needs specialized skill-sets and thorough knowledge of the code to make modifications.

Building, deploying and enhancing applications are very EXPENSIVE !

Problem Statement

How can you improve productivity without jeopardizing profitable capital to effort ratio?

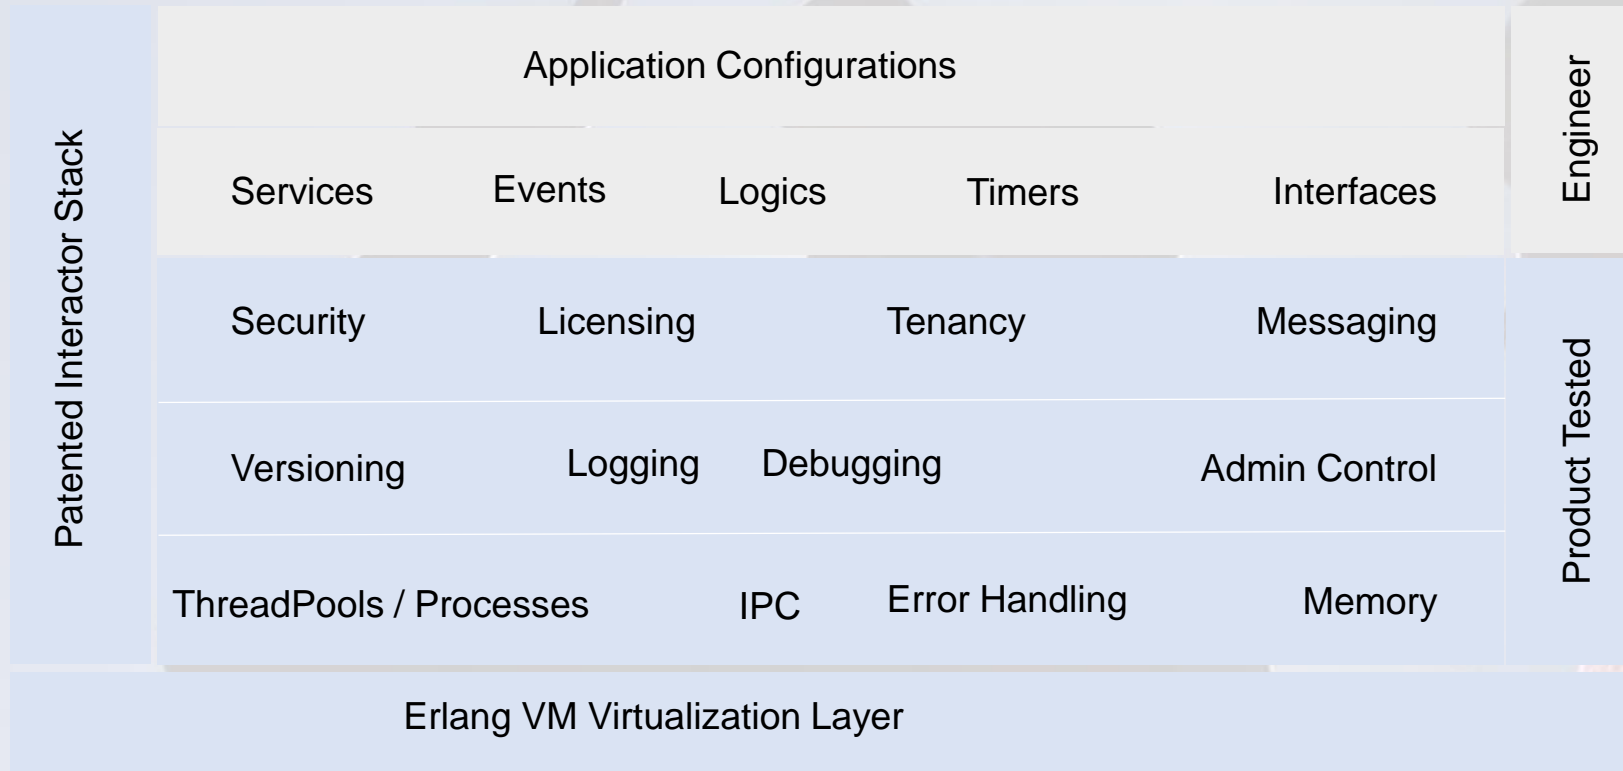

Modernize Your Applications

- Invest in Abstractions
- Invest in Event Driven Architecture
- Modularize with micro-services
- Focus only on your core application logic

Separate TRUTH from code and manage the TRUTH efficiently

Interactor

fastest way to build reliable software applications

Configurable , Event Driven , Light-weight and DevOps ready!

Using Interactor

- Separate Data, Context and Interaction elements from each other to provide uniform outlook to business layer (WYSIWYG)
- Create complex Real-time Event Driven applications with multi protocol interfacing.
- Configure every element within your application to allow for flexibility.

Interactor saves money, time and effort expelled to build robust applications

Benefits of Abstracted out Configurable Systems

Got us out of cave...

Configurable Networks – Abstraction of physical and network layers

Configurable Databases – Abstraction of Indexing Algorithms

Configurable Webservers – Abstraction of specific set of web logic

Interactor makes application logic configurable without any DOWNTIME !

VALUE

Interactor ⇔ AI = More \$\$

***Interactor can Re-configure themselves based on AI output
at Runtime without any SDLC***

Adaptable dynamic application architecture is now a REALITY
